Due to a programming error, the degrees of freedom for the error term of the $minF'$ statistics are incorrect. On page 419, the values should be: $minF'(1,9) = 1.68$ (the second df was listed as 10). On page 422, the values should read: $minF'(1,8) = 0.77$ (the second df was listed as 3) and $minF'(1,9) = 0.20$ (the second df was listed as 10). Fortunately, these errors do not affect the conclusions drawn from the analyses.
